Governor Edmund G. Brown Jr Declares State of Emergency in Trinity County

On 08/31/17 Governor Edmund G. Brown Jr. issued an emergency proclamation for Trinity County due to the effects of the Helena Fire, which has burned thousands of acres, damaged critical infrastructure, destroyed homes and caused the evacuation of residents.

Heat Event Briefing

The California State Warning Center (CSWC) continues to monitor the upcoming strong high pressure that will maintain very hot weather across California into next week. The National Weather Service Western Region Headquarters Regional Operations Center (NWS W-ROC) and California Independent System Operator (CAISO) are closely monitor the potential impacts due to the widespread elevated temperatures and providing updates as they become available. Due to the prolonged hot temperatures across California, the NWS W-ROC will provide a Heat Briefing to the CSWC on 08/31/17.

Flex Alert

- The California Independent System Operator Corporation (ISO) has issued a statewide Flex Alert that calls for voluntary electricity conservation from 1300 - 2200 hours, 09/01/17. Per the ISO Emergency Response Coordinator (ERC), ISO does not anticipate having any issues meeting demand during the heat event.
- Consumers are urged to conserve electricity especially during the afternoon when air conditioners typically are at peak use. Consumers can help avoid power interruptions by turning off all unnecessary lights, using major appliances before 1300 hours and after 2200 hours, and setting air conditioners to 78 degrees or higher.
- Persistent hot temperatures and tight supply can strain the power grid, as air conditioner use increases. The forecast peak use on 09/01/17, is expected to exceed 50,000 megawatts, which if met will be the highest demand on the grid seen so far this year. The ISO's service territory serves about 80 percent of California's electricity consumers.

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

Isolated thunderstorms today then scattered thunderstorms Saturday through the middle of next week

Gusty northeast to east winds across Southern California through Sunday morning

Very hot through Saturday

A strong ridge of high pressure will build into Northern California from the Pacific Ocean causing moisture to decrease and only allowing for isolated shower and thunderstorm activity across the region through Saturday morning. Today will be the warmest day of this current heat wave, with upper 80s and 90s across the mountains and between 105 and 115 in the valleys. Minimum humidity will be mainly in the teens today. The strong ridge of high pressure will move to the Great Basin on Saturday and remain parked there through the middle of next week while an area of low pressure forms off the Southern California Coast. Moisture will increase due to the remnants of Tropical Storm Lidia and cause scattered showers and thunderstorms across the Sierra and all of Southern California Saturday afternoon through the middle of next week. The rest of Central California will also receive scattered showers and thunderstorms starting Sunday. Most of the region will continue to see minimum humidity in the teens Saturday, but there will be a big jump in humidity across Southern California south and east of Los Angeles County. The entire region will have high humidity Sunday through the middle of next week. Significant cooling will start Sunday, with near normal temperatures Monday through the middle of next week. There will be northeast to east winds of 15 to 25 mph with gusts to 40 mph over the mountains and below the canyons and passes of Southern California through Sunday morning. Across San Diego County, there will be easterly winds of 20 to 30 mph with gusts to 50 mph Saturday morning through Sunday morning.
